Embrace Your Feline Diabetics: A Novel Strategy to Remove Fear, Anxiety, and Stress From Patients, Clients, and Veterinary Teams

A diagnosis of feline diabetes can be overwhelming, scary, and stressful for cat owners. The diagnostic process and long-term management can impact the owner's and their cat's emotional health. Presenting easier treatment options can soften the news and make diabetes management easier to handle. Join Dr. Natalie L. Marks, DVM, CVJ, Elite FFCP-V, as she reviews alternate treatment options that can help remove the fear, anxiety, and stress from diabetes management.

In this webinar, you'll learn:

- **Common clinical presentations and diagnostics for feline diabetic patients**
- **The impact of diabetes on the patient's and pet parent's emotional health**
- **The mechanism of action, dosing, and possible adverse events associated with alternate treatment options**

This lecture is RACE approved for 1 CE hour.

Thursday, December 12 at 8pm EST
