

# Optimizing Care for Brachycephalic Dogs: Addressing Respiratory and Aerodigestive Disorders

Caring for brachycephalic dogs, known for their charmingly unique faces but complex respiratory and aerodigestive challenges, requires a nuanced and compassionate approach. This webinar with Carol Reiner, DVM, DACVIM (SAIM), PhD, FFCP-V, delves into the comprehensive and stress-free management of these beloved breeds, addressing the intricacies of Brachycephalic Obstructive Airway Syndrome (BOAS) and related conditions. Effective management involves thorough diagnostic evaluations of both the respiratory and aerodigestive systems to comprehensively address significant clinical abnormalities.

## What You'll Learn:

- **Comprehensive Diagnostics:** Discover advanced techniques for identifying and evaluating respiratory and aerodigestive disorders in brachycephalic dogs, focusing on precision and minimizing patient stress.
- **Proactive Risk Management:** Develop strategies to mitigate risks by addressing critical comorbidities, such as obesity and infections, while preventing complications and promoting a calm, reassuring environment.
- **Innovative Treatment Approaches:** Explore medical and surgical interventions that prioritize recovery, long-term wellbeing, and a positive, low-stress experience for both pets and caregivers.

**This webinar is RACE approved for 1 CE hour.**

**Thursday, March 13 at 1pm EST**
