Canine Parvovirus
Monoclonal Antibody

The primary source of parvovirus is the feces
of infected dogs. Find out more about detection
and preventions on StopParvo.com

CPMA is USDA conditionally approved

Take the sting out of a difficult diagnosis.

Receiving a Canine Parvovirus (parvo) diagnosis can seem daunting on many levels for you, your pup, and even the veterinary team. This common disease is often deadly when left untreated but, fortunately, your vet now has access to Canine Parvovirus Monoclonal Antibody (CPMA).

CPMA from Elanco is the only USDA conditionally approved treatment for parvo, effectively fighting the virus to help puppies recover more quickly and come home sooner. But the cost of treatment may be an obstacle for you.

The Benefits of CPMA Treatment

CPMA has a high success rate in treating Canine Parvovirus, giving your furry friend a great chance of a full recovery.

CPMA adheres to the highest safety standards, having received conditional approval from the United States Department of Agriculture (USDA).

CPMA specifically targets the Canine Parvovirus, providing relief to your beloved pet, potentially allowing them to go home faster, reducing vet costs.

Every. Minute. Counts.
