

My vet has applied Neptra™ – how does this work to treat ear infections?

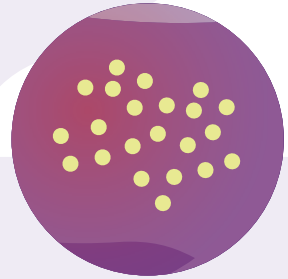

Neptra keeps working in your dog's ear for up to 4 weeks, meaning there's no need for ear drops at home. Neptra contains 3 important ingredients. These work together to treat the infection and provide relief from the pain caused by inflammation in the ear.

Anti-inflammatory

Mometasone

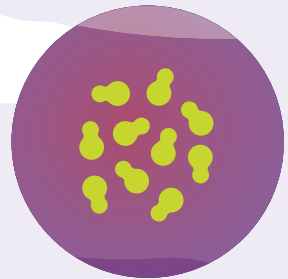

Gets to work quickly to get your dog feeling more comfortable.

Antibiotic

Florfenicol

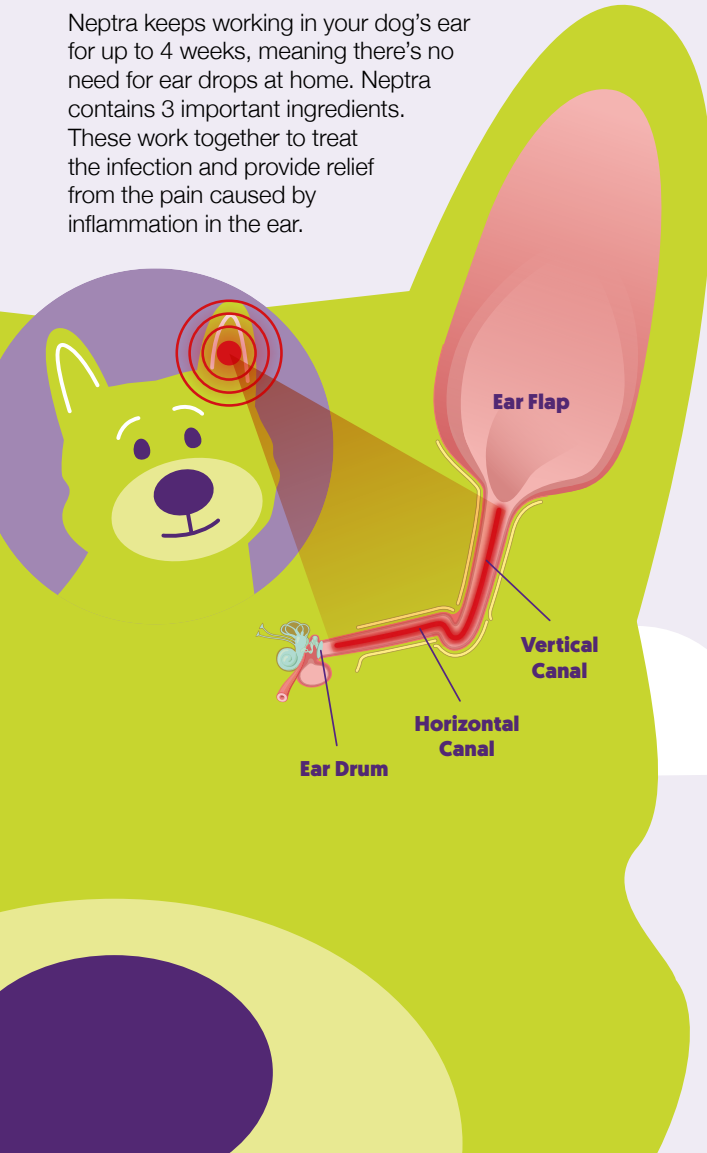

An antibiotic that treats the most common bacteria found in canine ear infections.¹

Anti-fungal

Terbinafine

Treats the fungal infection that is common in ear infections.

1 in 5 dogs suffer from ear infections²

Although ear infections are quite common in dogs, they need to be treated immediately. Ear infections cause inflammation, which can be painful, and there is often also a bacterial or fungal infection in the ear canal.

What is Neptra?

Neptra is a one-dose treatment for ear infections that's only administered by vets in the practice:

- Relieves pain and inflammation**
- Keeps working in your dog's ear for up to 4 weeks**
- Doesn't require any additional attention at home or ear cleaning that your dog might find upsetting while their ear is sore**

If your dog experiences repeated ear infections, it's a good idea to talk to your vet about possible underlying causes which may include allergies.

Your vet may have asked you to come back in a few weeks for a follow-up. It's important you keep that appointment, for your vet to assess the improvement in your dog's ear infection.

Neptra – Treating your dog's ear infection just got easier. Find out more here.
