Prolaject™ B₁₂

1000 PLUS SELENIUM

For the treatment and control of cobalt and selenium deficiency in sheep and cattle.

Active Constituents: Each mL contains 1000µg hydroxocobalamin (Vitamin B₁₂) and 2mg selenium (as selenate).

DIRECTIONS FOR USE
By law the user must take due care, obtaining expert advice when necessary, to avoid unnecessary pain and distress when using the product other than as directed on the label.

Read package insert prior to use.

By subcutaneous (under the skin) injection to be given into the anterior half of the neck.

DOSE RATE	Lambs	1mL	at tailing or weaning
	Sheep	1.5 – 2.5mL	pre-lambing
	Calves	5mL	from 2 months of age
	Cows	10 – 12mL	pre-calving

STORAGE Store below 25°C. Protect from light.

Registered pursuant to the ACVM Act 1997, No A6170
See www.foodsafety.govt.nz for registration conditions.

READ ENTIRE LABEL BEFORE USE.
FIRST AID For advice contact the National Poisons Centre
 0800 POISON (0800 764 766) or a doctor.
ENVIRONMENTAL PROTECTION Harmful to aquatic life with long lasting effects. Avoid contamination of any water supply with product or empty container. Avoid release to the environment. Collect spillage.
INDICATIONS To treat and control cobalt and selenium deficiency in sheep and cattle grazing cobalt- and selenium-deficient pasture.
DIRECTIONS FOR USE *By law the user must take due care, obtaining expert advice when necessary, to avoid unnecessary pain and distress when using the product other than as directed on the label.*
Read package insert prior to use.
 By subcutaneous (under the skin) injection to be given into the anterior half of the neck.

DOSE RATE

Lambs	1mL	at tailing or weaning
Sheep	1.5–2.5mL	pre-lambing
Calves	5mL	from 2 months of age
Cows	10–12mL	pre-calving

- Cobalt deficiency in soil and/or pasture leads to a lack of Vitamin B₁₂ in body tissues of stock, which subsequently may have poor growth rates and ill thrift, particularly in young animals.
- Before treatment, establish pasture cobalt levels and/or Vitamin B₁₂ status of stock.
- Treatment of pregnant ruminants should benefit newborn animals, particularly when treated in latter stages of pregnancy.
- Supplementation of young ruminants should begin at or before weaning.
- Treatment is likely to last only 4–6 weeks if liver storage levels of Vitamin B₁₂ and pasture levels of cobalt are low.
- Seek veterinary advice if poor stock condition persists after treatment.

- Do not use this product unless animals are deficient in both cobalt and selenium.
- Do not re-dose this product within three months of the previous dose. Within this period, re-treat with a non-selenised Vitamin B₁₂ supplement.
- Do not use at the same time as any other selenised fertiliser, prill or product and do not exceed the stated dose or frequency without consulting a veterinarian.

WITHOLDING PERIODS Milk and Meat: **NIL**
STORAGE Store below 25°C. Protect from light.
DISPOSAL Preferably dispose of the product by use. Otherwise dispose of product and packaging in an approved landfill or other approved facility.
